

DAY 1 · FOUNDATION LAYER

Power BI & Dataverse — The Foundation Layer

KEY TAKEAWAYS

- Excel doesn't have to be the end of the data journey — it can be a window into governed data sitting in Power BI and Dataverse.
- Power BI semantic models give you a clean curated view; Dataverse gives you the full governed object. Know the difference.
- Garbage in, garbage out — just faster. AI tools are only as good as the data foundation underneath them.
- Connecting Excel to cloud data ends version chaos: one source of truth, refreshable, shareable across the whole stack.

TOOLS YOU TOUCHED

Excel · Power BI semantic models · Dataverse · OneDrive · Power Query

TRY THIS ON MONDAY

Pick one report you currently rebuild from a CSV every week. Replace the CSV import with a Power BI semantic model connection or a Dataverse table connection. Watch your refresh time drop.
