

DAY 3 · INTELLIGENCE LAYER

Copilot, Python & Agent Mode — The Intelligence Layer

KEY TAKEAWAYS

- Copilot is reactive — it answers prompts. Agent Mode is proactive — it plans, executes, and self-corrects multi-step workflows.
- Copilot accelerates your work. Agent Mode begins to do the work. Your role shifts from doing to managing.
- Format your range as a Table (Ctrl-T) before you ask Copilot anything. Copilot in Excel comes alive on Tables.
- Python in Excel lives in PY() cells and runs in Microsoft's cloud — use it for the analytical work formulas can't do (correlation, regression, clustering, plotting).
- Use Copilot for in-cell help. Use Claude or another assistant for thinking through your analytical approach. Right tool, right step.

TOOLS YOU TOUCHED

Copilot in Excel · Agent Mode · Python in Excel (PY cells) · Excel Tables

DEMO FILES

TRY THIS ON MONDAY

Take one workbook you build from scratch every month. Try Agent Mode with a single goal-oriented prompt and see how far it gets you. Critique its work like a junior analyst.
