

DAY 4 · EXECUTION LAYER

Office Scripts & AI-Powered Power Automate — The Execution Layer

KEY TAKEAWAYS

- Office Scripts capture repeatable Excel actions in TypeScript. You can record them, edit them, and reuse them forever.
- Power Automate runs your scripts on triggers — schedules, file uploads, email arrivals, form submissions — so workflows run without you opening anything.
- Power Automate is now an AI platform. Copilot in the flow designer builds flows from plain English; AI Builder and prompt actions put GPT-class intelligence inside the flow itself.
- Anywhere you do the same Excel clicks more than twice, that's a candidate for an Office Script + Power Automate flow.
- AI gives you insights. Scripts + Flows make those insights actually happen out in the business.

TOOLS YOU TOUCHED

Office Scripts · Power Automate · AI Builder · Copilot in Power Automate · Adaptive Cards

TRY THIS ON MONDAY

Pick the most repetitive Excel task in your week. Record it as an Office Script. Wrap it in a scheduled Power Automate flow. Reclaim the time forever.
